

Cardiac Patient Monitoring System — Sprint 2

Sprint 2 Goal

Integrate and verify authentication and authorization in the Cardiac Patient Monitoring System API, define the required Admin and Patient roles, and ensure Sprint 2 changes are reviewed before merging into main.

Identity Integration

The project already uses ASP.NET Core Identity.

The existing ApplicationDbContext inherits from:

IdentityDbContext<IdentityUser>

The Identity tables are already included in the current SQL Server database.

Identity Migrations

The existing Identity-related migrations were reviewed:

AddIdentity

AddPatientIdentityRelationship

The AddIdentity migration adds the ASP.NET Core Identity tables.

The AddPatientIdentityRelationship migration adds the relationship between:

Patients.UserId

and:

AspNetUsers.Id

No destructive changes to the existing project tables were identified.

Roles

The project uses two roles:

Admin

Patient

Admin

Can view and manage patient-related data.

Patient

Can create their own patient profile and related health records.

Planned Role Structure

Endpoint Group	Operation	Required Role
Authentication	Register	Public
Authentication	Login	Public
Patients	GET	Admin
Patients	GET by ID	Admin
Patients	POST	Patient
Patients	PUT	Admin
Patients	DELETE	Admin
Vital Signs	GET	Admin
Vital Signs	GET by ID	Admin
Vital Signs	POST	Patient
Vital Signs	PUT	Admin
Vital Signs	DELETE	Admin
Medications	GET	Admin
Medications	GET by ID	Admin
Medications	POST	Patient
Medications	PUT	Admin

Endpoint Group	Operation	Required Role
Medications	DELETE	Admin
Appointments	GET	Admin
Appointments	GET by ID	Admin
Appointments	POST	Patient
Appointments	PUT	Admin
Appointments	DELETE	Admin

Sprint 1 Retrospective Action

Complete the pull request review before merging any Sprint 2 feature into main.

Sprint Backlog

Aa Name	✳ Status
<u>Review existing ASP.NET Core Identity integration</u>	Done
<u>Verify ApplicationDbContext Identity configuration</u>	Done
<u>Review existing Identity migrations</u>	Done
<u>Verify Identity tables in SQL Server</u>	Done
<u>Verify Admin and Patient roles</u>	Done
<u>Document role permissions for project endpoints</u>	Done
<u>Review existing authorization attributes</u>	Done
<u>Verify authentication and authorization wiring</u>	Done
<u>Apply Sprint 1 retrospective action before merging Sprint 2 changes</u>	Done
